

Grade 6 Content Connections between 2021 and 2014

The purpose of this document is to assist teachers with identifying the content connections between the South Carolina College-and Career-Ready 2021 Science Standards and the 2014 Science Standards and Performance Indicators (PI). **These content connections may not be direct or match in breadth/depth between the two sets of standards.** For the 2022–2023 school year, students will be assessed on the 2014 Science Standards.

2021 Performance Expectation	2014 PI
6-PS1-4. Develop and use a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed.	Nothing Direct
6-PS3-3. Apply scientific principles to design, construct, and test a device that either minimizes or maximizes thermal energy transfer.	6.P.3A.5 6.P.3A.6
6-PS3-4. Plan an investigation to determine the relationships among the energy transferred, the type of matter, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.	Nothing Direct
6-PS4-2. Develop and use a model to describe that waves are reflected, absorbed, or transmitted through various materials.	8.P.3A.3
6-LS1-1. Conduct an investigation to provide evidence that living things are made of cells; either one cell or many different numbers and types of cells.	7.L.3A.1
6-LS1-2. Develop and use a model to describe the function of a cell as a whole and ways the parts of cells contribute to the function.	7.L.3A.3
6-LS1-3. Use argument supported by evidence for how the body is a system of interacting subsystems composed of groups of cells.	7.L.3B.1 7.L.3B.2
6-LS1-8. Gather and synthesize information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.	6.L.4A.1
6-ESS1-4. Construct a scientific explanation based on evidence from rock strata for how the geologic time scale is used to organize Earth’s 4.6-billion-year-old history.	8.E.6A.1 8.E.6A.2
6-ESS2-1. Develop a model to describe the cycling of Earth’s materials and the flow of energy that drives this process.	Nothing Direct
6-ESS2-2. Construct an explanation based on evidence for how geoscience processes have changed Earth’s surface at varying time and spatial scales.	8.E.5A.4 8.E.5A.5

2021 Performance Expectation	2014 PI
6-ESS2-3. Analyze and interpret data on the distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of the past plate motions.	6.E.2A.2 8.E.5A.5
6-ESS2-4. Develop a model to describe the cycling of water through Earth’s systems driven by energy from the sun and the force of gravity.	6.E.2A.3
6-ESS2-5. Analyze and interpret data to provide evidence for how the motions and complex interactions of air masses result in changes in weather conditions.	6.E.2B.1 6.E.2B.2
6-ESS2-6. Develop and use models to describe how unequal heating and rotation of the Earth cause patterns of atmospheric and oceanic circulation that determine regional climates.	6.E.2B.3 6.E.2B.4 6.P.3A.5 8.E.4B.3
6-ESS3-2. Analyze and interpret data on natural hazards to identify patterns, which help forecast future catastrophic events and inform the development of technologies to mitigate their effects.	8.E.5B.3
